

## NANO Link Receiver

### Wireless access point for Nano data logger

The Nano Link receiver transmits the data logger readings to the MySirius software via LAN cable or WiFi. The receiver (2.4 GHz frequency) is equipped with an external antenna, bright colored LEDs and an acoustic signal to identify the presence of any alarms in progress.

By using its ON/OFF contact it is possible to connect a further external acoustic siren. Function can also be implemented with Lora Data logger. Complete with antenna and USB 5 Vdc power supply.
